

# Trapezoids and Kites

To verify and use properties of trapezoids and kites.

# Vocabulary

#### Review

Underline the correct word to complete each sentence.

- An isosceles triangle always has two three congruent sides.
- 2. An equilateral triangle is also a(n isosceles) right triangle.
- 3. Cross out the length(s) that can NOT be side lengths of an isosceles triangle.

### Vocabulary Builder

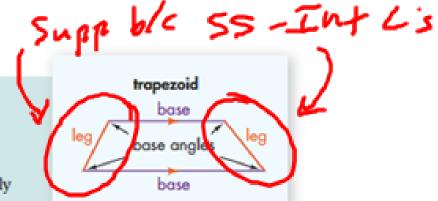

trapezoid (noun) TRAP ih zoyd

Related Words: base, leg

Definition: A trapezoid is a quadrilateral with exactly

one pair of parallel sides.

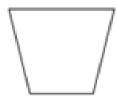

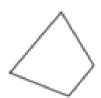

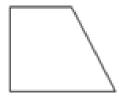

#### Use Your Vocabulary

Cross out the figure that is NOT a trapezoid.

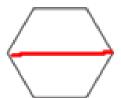

Circle the figure(s) than can be divided into two trapezoids. Then divide each figure that you circled into two trapezoids.

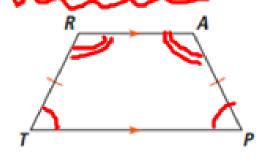

# Theorems 6-19, 6-20, and 6-21

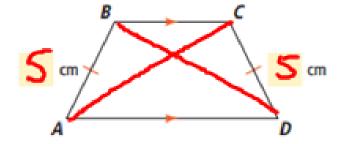

Props. of Trapezoids

Theorem 6-19 If a quadrilateral is an isosceles trapezoid, then each pair of base angles ISOS CE 9 5 is congruent.

Theorem 6-20 If a quadrilateral is an isosceles trapezoid, then its diagonals are congruent.

- **6.** If TRAP is an isosceles trapezoid with bases  $\overline{RA}$  and  $\overline{TP}$ , then  $\angle T \cong \angle P$  and  $\angle R \cong \angle A$ .
- Use Theorem 6-19 and your answers to Exercise 6 to draw congruence marks on the trapezoid at the right.
- **8.** If *ABCD* is an isosceles trapezoid, then  $\overline{AC} \cong \overline{BD}$ .
- 9. If ABCD is an isosceles trapezoid and AB = 5 cm, then CD = 5 cm. (2 2)
  - Use Theorem 6-20 and your answer to Exercises 8 and 9 to label the diagram at the right.

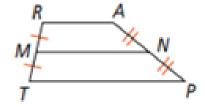

# Theorem 6-21 Trapezoid Midsegment Theorem If a quadrilateral is a trapezoid, then

- (1) the midsegment is parallel to the bases, and
- (2) the length of the midsegment is half the sum of the lengths of the bases.
- 11. If TRAP is a trapezoid with midsegment  $\overline{MN}$ , then

(2) 
$$MN = \frac{1}{2} \left( PA + TP \right)$$

## Problem 2 Finding Angle Measures in Isosceles Trapezoids

Got it? A fan has 15 angles meeting at the center. What are the measures of the base angles of the congruent isosceles trapezoids in its second ring?

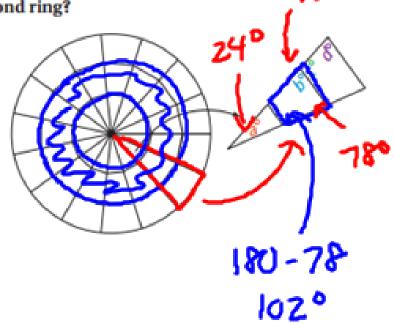

Use the diagram at the right for Exercises 12-16.

12. Circle the number of isosceles triangles in each wedge. Underline the number of isosceles trapezoids in each wedge.

13. 
$$a = 360 \div 15 = 24$$
  $\bigcirc = 360^{\circ}$ 
14.  $b = \frac{180 - 24}{2} = 78$  Isos  $\triangle$ 

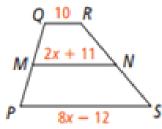

14. 
$$b = \frac{180 - 29}{2} = 78$$
 Isos  $\triangle$ 

17. The measures of the base angles of the isosceles trapezoids are 78° and 102°

## Problem 3 Using the Midsegment Theorem

**Got It?** Algebra  $\overline{MN}$  is the midsegment of trapezoid *PQRS*. What is x? What is MN?

18. The value of x is found below. Write a reason for each step.

$$MN = \frac{1}{2}(QR + PS)$$

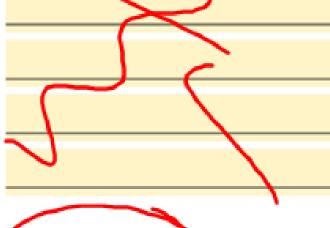

$$2x + 11 = \frac{1}{2}[10 + (8x - 12)]$$

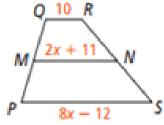

$$2x + 11 = \frac{1}{2}(8x - 2)$$

$$2x + 11 = 4x - 1$$

$$\frac{12 = 2x}{2}$$

19. Use the value of x to find MN.

A kite is a quadrilateral with two pairs of consecutive sides congruent and no opposite sides congruent.

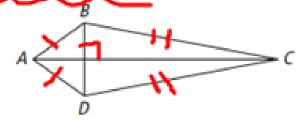

rake note

Theorem 6-22

Prop. of Kite

Theorem 6-22 If a quadrilateral is a kite, then its diagonals are perpendicular.

- **20.** If *ABCD* is a kite, then  $\overline{AC} \perp \overline{BD}$
- Use Theorem 6-22 and Exercise 20 to draw congruence marks and right angle symbol(s) on the kite at the right.

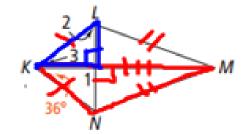

#### Problem 4 Finding Angle Measures in Kites

Got It? Quadrilateral KLMN is a kite. What are  $m \angle 1$ ,  $m \angle 2$ , and  $m \angle 3$ ?

22. Diagonals of a kite are perpendicular, so  $m \angle 1 = 2$ 

**23.** 
$$\triangle KNM \cong \triangle KLM$$
 by SSS, so  $m \angle 3 = m \angle NKM = \bigcirc$ 

**24.**  $m\angle 2 = m\angle 1 - m\angle$  by the Triangle Exterior Angle Theorem.

**25.** Solve for *m*∠2.

$$\begin{array}{r} 22 + 36 + 90 = 180 \\ 22 + 126 = 180 \\ \hline -126 - 126 \\ \hline 22 = 540 \end{array}$$

# Lesson Check • Do you UNDERSTAND?

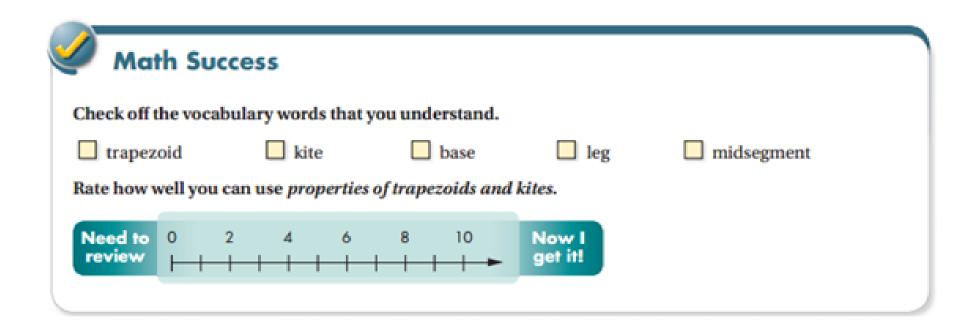

Compare and Contrast How is a kite similar to a rhombus? How is it different? Explain.

26. Place a ✓ in the box if the description fits the figure. Place an X if it does not.

Kite	Description	Rhombus	
	Quadrilateral		
	Perpendicular diagonals	<b>✓</b>	
X	Each diagonal bisects a pair of opposite angles.	<b>/</b>	
X	Congruent opposite sides		,
	Two pairs of congruent consecutive sides	<b>/</b> (	A114 ≈)
X	Two pairs of congruent opposite angles	/	
X	Supplementary consecutive angles	<b>V</b>	

27. How is a kite similar to a rhombus? How is it different? Explain.
